

Translation::getEffect

```
graph LR; A[Translation::getEffect] --> B[Molecule::rkApprox]; A --> C[Trace::trace]; B --> D[Molecule::getValue]
```

The diagram illustrates a sequence of operations. It begins with a gray box labeled 'Translation::getEffect'. From this box, two arrows branch out: one pointing to 'Molecule::rkApprox' and another to 'Trace::trace'. From 'Molecule::rkApprox', a third arrow points to 'Molecule::getValue'. All boxes are rectangular with black borders, and the arrows are dark blue.

Molecule::rkApprox

Molecule::getValue
